

A new era of Product Designing!  
Let algorithms do the work for you.

## Senior Frontend Web Developer (m/f/d)

Join us and develop software for the age of digital manufacturing. Our core product, **paramate**, enables the creation of truly awesome custom 3D products.

### Full Time, Permanent

You love to develop innovative solutions? You have extensive experience in **frontend web development** and are strong in **JavaScript, HTML and CSS**? You like to see your ideas come to life and want to work with an ambitious tech startup?

Then this is the perfect job for you!

Hello, we are trinckle, an ambitious and award-winning tech Start-Up in **Berlin**. Our core software, **paramate**, automates 3D-designing and enables **mass-customization of 3D-printed products**. Our high-performance, easy to implement cloud solution is a tool for making innovative customizing applications. It is used for a wide range of industries, from mechanically optimized robotic components to patient specific orthotics and can as well be used by makers for their creative ideas.

Our Software team is looking for a **Senior Frontend Web Developer** who help us build the web frontend parts for all our exciting products and applications. You would mostly work on our own products, including participating in the development of our frontend libraries, but help with our general websites and the web frontends of our clients' projects as well.

At trinckle we believe in the quality of our teams and respect all styles. While there are certain roles that require us to be the office, our workforce is inclusive. The Senior Frontend Web Developer meets twice a week and should work independently (office and/or **hybrid**), like to collaborate and help our developers and product team with your skills and knowledge. You should be comfortable dealing with our B2B accounts from time to time. Having a good spatial and technical imagination is needed as well, but most important is your passion for your work and your willingness to build up knowledge.

We are a tight-knit team of developers with a lot of projects on the go. We need someone who delivers **well-structured** code and **maintainable** solutions with a high level of **usability**, who is driven to get things done and who we can rely on.

Get to know the required skill-stack and learn what's in for you! Check out page 2/2
